

Deco Bubbles

Qualatex® Deco Bubbles are made of stretchy plastic that protects and displays latex balloons, preventing oxidation and making them last longer. Inflate Deco Bubbles with a latex regulator until wrinkles disappear from the seam, and tie tightly with a Bubble Cinch Knot. When double-stuffed with a 16" latex balloon, a cinch knot is not required. Simply tie the latex balloon (not including the Bubble) like normal. Deco Bubbles do not have valves, and are designed for use by balloon professionals.

Use Deco Bubbles to create:

- **Deco Gumballs**
- **Deco Double Bubbles**
- **Balloon Garland**
- **And More!**

Solid-color Bubbles

Solid-color Bubbles from Qualatex® are 15", stretchy-plastic balloons with self-sealing valves. Available in eleven vibrant colors and now Clear, this new product will heighten your decor potential by allowing you to create longer-lasting Classic Balloon Decor!

Solid-color Bubbles:

- Are non-allergenic and never oxidize
- Come four per moisture-proof package
- Float with helium and last even longer when air filled
- Are intended for use with a latex regulator
- Feature extended tabs for easy tying in pairs
- Match Qualatex latex colors
- May vary in performance in some colors when used in extreme weather conditions

Solid-color Bubbles are pop resistant but not pop proof. They can withstand temperature changes; however, exposing them to extreme heat (temperatures exceeding 120 degrees F, 50 degrees C) may result in poor performance. Enclosed areas, such as a vehicle in sunlight, can exceed these temperatures. Some colors may absorb heat faster than others. At this time, we recommend that you not expose Bubbles to these extreme conditions.

Due to photography and color printing processes, exact colors may vary.

Stretchy Plastic Balloons Solid-color Bubbles

IMPORTANT:

Inflate immediately after opening package.

Single Bubble

1. Use a **latex regulator only**, and keep inflating until the Bubble is very round and the wrinkles and bumps are gone. Bubbles stretch like latex balloons and look like beach balls when properly inflated (see illustration below).

Double Bubble (4 Easy Steps)

1. Locate the **blue valve** (A). Slightly inflate the outer bubble with a **latex regulator** so the inner shape has room to inflate.
2. Locate the **white valve** (B). Fully inflate the inner shape with a **foil regulator**.
3. Use both hands to manipulate the foil shape so it's in a good position.
4. Return to the **blue valve** (A) and fully inflate the outer Bubble with a **latex regulator**. Keep inflating until the Bubble is very round and the wrinkles and bumps are gone (see illustration).

Tip: If the inner shape shrinks noticeably while inflating the outer bubble, return to the white valve (B). Use your latex regulator to add a micro-second of helium, or use a hand pump to add just enough air to fill out the inner shape.

Latex Regulators

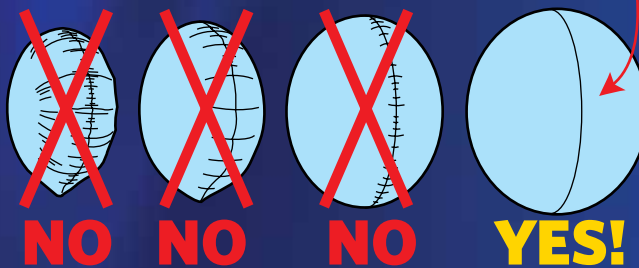

Latex Regulator

Foil Regulator

Inflated Bubbles

Keep inflating,....keep inflating,.....now, you can stop.

Special stretchy plastic allows Bubbles to stretch **BIG AND ROUND!** Watch inflation videos at qualatexbubbles.com.

Tips

Once the package is opened, Bubbles **must be inflated immediately** or they'll dry out. Discard the moisture pack after inflation.

Do NOT use a foil (auto shut-off) regulator to inflate Single Bubbles, the outer bubbles of Double Bubbles, or Deco Bubbles; if you do, the foil regulator will shut off too soon and your Bubble will look more like a foil balloon. **ONLY** use latex regulators on these Bubbles, and keep inflating until the wrinkles and bumps are gone.

Wear eye and ear protection when inflating balloons.

All Bubble Balloons come packaged with a **moisture pack** to prevent them from drying out. Single and Double Bubbles also include **pre-attached ribbon**.

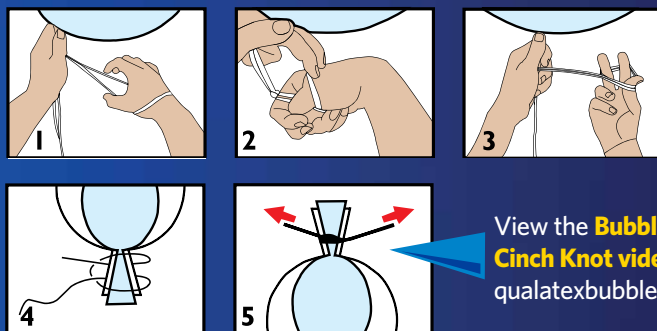

Bubbles never oxidize and are long-lasting, making them ideal for indoor **and** outdoor use.

Deco Bubble

- Inflate with a latex **balloon regulator** immediately upon opening. When air inflating, use nitrogen or compressed air. Do not use an automatic shut-off regulator or regular air inflator; they do not have enough power to inflate a Qualatex® Bubble Balloon® wrinkle-free.
- When inflating Deco Bubbles, NEVER leave ANY wrinkles on the seam. Although the balloon will seem tight, continue inflating and stop just as the wrinkles disappear, leaving a perfectly smooth seam.
- Secure the Deco Bubble TIGHTLY with a Bubble Cinch Knot. Tying extremely tight will ensure a long-lasting Deco Bubble.

View the **Bubble Cinch Knot** video at qualatexbubbles.com

Bubble Cinch Knot

1. Make a loop around your wrist and grab both sides.
2. Use your other hand to pull the loop over itself and create a double loop.
3. Put your thumb, index, and middle finger through the double loop so it will open and close on itself.
4. Twist the necks of the balloons, pass them through the loop, and cinch tightly.
5. Turn the balloon upside down, then pull the tails apart VERY tightly. Bring the tails around to the opposite side of the neck and tie twice.

Tip: Support balloon between your belly and a counter.

Tips

When using helium, inflate the Deco Bubble as well as ALL balloons inside the Deco Bubble with helium. When using air, inflate ALL balloons with air.

Do not use HI-FLOAT® products or Balloon Shine™ on Bubbles or latex balloons inside Bubbles.

Bubbles are pop resistant, but not pop proof. They can withstand outside pressure changes. However, exposing them to extreme heat or sharp objects may cause them to burst.

A 160Q latex balloon may be tied to the Bubble neck to secure it into a decor piece, such as a Column.

Helium Guidelines

Over inflating or under inflating Bubbles can decrease float times, so follow package instructions to inflate properly and achieve the best float times. Actual flying times will also depend on temperature and atmospheric conditions. Deco Bubble float times will vary if other types of balloons are placed inside. The average number of Bubble Balloons inflated with a 242 cu. ft. tank is 563 for 15" Solid-color balloons, 250 for 22" Single balloons, and 200 for 24" Double balloons.
